Total Energy Systems®

What environmental benefits happened 2020 due to COVID-19

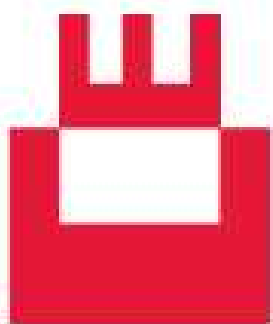

- The confinement brought less consumption of fuels.
- Less movement of international carriers less consumption of fuels.
- Home office – more family relations.
- More local consumption.
- More local production.
- Reduction of CO2 gases and other gases 7%.

Energy clean projects to achieved at short term in Mexico

- Solar Thermal projects- production of solar energy to heating wáter for residential and Industrial uses. This will reduce the uses of fossil fules consumption .
- Use of cow manure and other residauls from animals as well as agro waste, in a controled spaces, to produce Biodegestors methane gas, avoiding it from going into the environment, to be used as fuel is sustitution of fossil fuels.
- Utilization of wastes such as used cooking oil to substitute fossil fuels in burning in boilers with the elimination in site of posible contaminations to wáter and reduction of CO2 emissions.
